

PTSD Research at Homewood Research Institute

Investigating the Use of Goal Management Training in Improving Cognitive Functioning in Public Safety Personnel with PTSD

Goal Management Training™ (GMT) is a 9-week program that aims to improve attention, memory, and executive functioning in individuals with Post-Traumatic Stress Disorder (PTSD). The program also seeks to improve functional outcomes, such as performance in both the workplace and educational settings.

HRI is conducting an experimental trial of GMT at Homewood Health Centre in Guelph, Ontario and at the Homewood Clinic in Mississauga, Ontario.

This study was approved by
the Homewood Research Ethics
Board

To participate, you must:

- ✓ Have a diagnosis of PTSD or are being treated for PTSD
- ✓ Have been or are currently a public safety member or first responder
- ✓ Experience difficulties in cognitive functioning, such as memory or attention
- ✓ Be able to attend one two-hour session per week, for nine weeks
